

Nexgen's Simple Trading Plan demo available at <http://nexgent3.com/education/>

Use the first 30 days using Nexgen's T3 Fibs ProTrader and Market Flow software is to evaluate & learn our highest probability trend trading & management rules. Use this time to start working on your ability to recognize high probability winning trades that will generate a real opportunity for profit. The following 90-120 days is spent working on the real world application of those rules and trade management placing live trades through simulation and replay practice **without assuming any financial risk**. (Trading on simulator during the day and market replay in the evenings or weekends).

PROFITABLE TRADING IS A SKILL that cannot be bought, it must evolve through practice, repetition and consistent application of a high probability trading plan. After you hone your skills trading and managing the markets as the plan dictates, and you have proven that your application of the rules will win, will you finally achieve real money day trading the markets. Be realistic with yourself, this is a profession and a skill. Those without successful trading experience need to plan on at least 90-120 days of study before they will be able to effectively and profitably execute the rules and the plan. Nexgen does not offer personalized trading advice but will help you learn the rules of the plan when you participate and share your practice trading with the educational room. Nexgen's documentation is for educational purposes. All speculation involves risk please disclaimers at www.nexgent3.com.

Traders should use 3-5 times required minimums per contract. [CLICK HERE FOR DETAILS](#)

\$400 per contract per day per contract is the end goal. Possible returns ([12 month](#))

\$100 per contract or less max stop on any position. Max loss per day \$300 per contract.

Good traders all have these traits and can say YES to these things.

I am (solely) 100% responsible for my analysis and trades, you don't need help.

I have proven my trades generate a positive outcome through simulation and practice.

I am 100% comfortable with my trades and follow my rules on every trade.

I understand the nuances of each trade setup through study and repetition on sim and replay.

I know when my reports will be out that could create potential additional risk [REPORTS](#)

- Learn the tutorials on educational page. [CLICK HERE](#)
- Read and understand the rules section of this trading plan
- **Join the live class room and participate.** If not watch market replay video and send pictures of your trades to your sale person Practice trading as much as possible using Market Replay. You must "TRADE" to become a better trader. Become 100% comfortable. You must get "feedback" on your rule application.

LEARN HIGH PROBABILITY TREND TRADES FIRST

HIGHEST PROBABILITY LOOKS (NEW USERS LEARN TREND TRADE #1 first)		EXAMPLE PIX

Trading Rules for Trend Trades

1. Trend Trade Setup Rules for smaller chart
 - a. Make sure NOTHING is hurting your trade from the RED section on page #2. If not then make sure your TRIGGER LINES are correct and you have room to your target.
 - b. Synthetic [triggers UP for buys](#) or [Synthetic triggers DOWN](#) for sells
 - c. Support or resistance ENTRY areas–Mid Band w/ correct color, Fibs w/ correct color
 - d. Fib2Fib oscillator location – lower 25% for buys – upper 25% for sells
2. Trend Trade **ENTRY** check list- Location check- Small Triggers Vs Synthetic Triggers
 - a. [If small triggers on "CORRECT SIDE" of 14-2 synth triggers get in earlier"](#)
 - b. [If small triggers on "WRONG SIDE" look for last spot on either small chart](#)
 - c. After any trade from WRONG SIDE of the Synthetic triggers , it is best if the market price and [SYNTH TRIGS makes a strong move](#) before taking another trend trade.
[IF NO BIG SYNTH TRIGGER](#) move then no more trend trades may be taken.
 - d. [Make sure trigger line location is your top priority](#) -If beyond the Fibonacci areas we can take "one more trade with trend".
3. Trade Management- Stops and Targets-
 - a. First watch this video complete with theory and actual executions of stops and targets so you will understand the basics. https://www.youtube.com/watch?v=ffrx_k_3pnw
 - b. If trigger lines and trend conditions are perfect, you must wait for Fibonacci targets and trail stops behind new reversal bar pivots after a retracement. **Be patient if triggers are very strong.** It is important that you follow the indicators and current market conditions to maximize profits.
 - c. If you are doing trend trades from the wrong side of the synthetic triggers you will have to manage your trades according to trigger strength location and divergences. [This is a typical look for a longer trend. Market Flow Chart of same thing](#)
 - d. [Watch for divergence to cause stop outs and look back at prior pivots for clues.](#)

There are times when you will be able to trade the tops or bottoms or what may potential be the "edge" . Watch this video repeatedly. <https://youtu.be/Xn9XplBib20>

1. When trading edges, WITH TREND on 14-2 chart is best and AGAINST is more difficult.
2. Do not trade against a heavily trending market that has broken major Fibonacci areas.
3. Make sure the triggers are not violating the areas you wish to trade.
4. Check that the market has weakened the synthetic triggers first before you attempt a counter trend trade or you will get run over. [TOO EARLY LOOK \(low probability\)](#) -- [SMALL TRIGGERS WEAKENING LOOK](#)
5. Use the Market Flow entry to help you time your entry, do not jump in front of a moving market
6. Watch first touch of the MID BAND for the first counter trend target.

Nexgen's T3 Market Flow -entry timing and confidence at entry areas

Per the trading plan you need price to be at either **Multiple Time Frame Fibonacci Edges or have Trend Trade Rules (POTENTIAL entry areas)** that you need help timing with Market Flow.

Market Flow Bar Pattern Examples

1. The bars and dots – Green dots on bars, show more buyers at a price versus sellers. Magenta dots will show more sellers at each price versus buyers.
2. The two black HORIZONTAL lines on the bar is where the majority of the volume traded. This area combined with the Magenta and Green dots will help you fine tune your entries.
3. [Tv Antenna looks](#)- reversal bars with a "stranded high volume area"
4. [White Paintbar](#)- the white paint bars show high volume movements in relation to the prior bar. They alternate one down and then one up so you won't get multiple white bars in same direction.
5. [Volume Reversals \(ARROWS\) White](#)- When the very next bar after a white paintbar closes in the opposite direction.
6. [Volume Reversals Yellow](#) – High volume up or down and then a reversal in volume
7. [Stranded Buyers or Sellers](#).. A dot at the top or bottom of a reversal bar is a signal

WARNING! – do not stare at the market flow when price is not at a key trading area, you will not get any trading signals that will be high probability with one exception during a VERY STRONG TREND.

[The long or short arrows with a volume reversal with strong trigger lines is an effective trade.](#)

Nexgen's T3 Market Flow Strategy

The T3 Market Flow is VERY effective at removing the stress of an entry execution. Once you reach an area that you wish to place a trade (rules met) then you simply turn on the market flow strategy.

FX USERS MUST MAKE SMALL ADJUSTEMENTS! – [CLICK HERE FOR DESCRIPTION](#)

1. [To turn on the strategy enable the correct buttons.](#)
2. If you wish to change strategy inputs ([watch this short video.](#))
3. Once you reach an area you wish to trade you may use any combination of manual or automated entries to fill your trade. ([watch this short video instruction](#))
4. Exiting a trade or orders you no longer want, just click the close button.
5. watch this video complete with theory and actual executions of stops and targets so you will understand the market flow strategy use for each of your entry and exit executions. https://www.youtube.com/watch?v=fFrX_k_3pnw

We feel compelled to say this again, **MAKE SURE You are following the rules from the plan before you turn on your market flow entry program.**

We know you will find the entry tools and trade management tools inside the T3 Market Flow Strategy very useful when studying and trading the market.

Key Thoughts:

- **Do not risk real money while building your trading skills.** Take this seriously, it is estimated that 95% of those without enhanced trading skills will lose money. Focus on your trading skill enhancement, the money will come after your skills improve dramatically.
- **PARTICIPATION** is vital to success. You will not “magically obtain” skills you did not possess prior to loading a software demo on your computer. You also cannot practice the “wrong” trading setups and improper trading skills and hope to achieve success. Only through an ongoing process of correct trade recognition, application of the rules, combined with feedback from the instructors to help enhance your skills, will you reach your financial trading objectives. Nexgen believes participation is the MOST IMPORTANT ELEMENT to your success.

When you recognize trade setups with a high probability for a positive outcome and possess the skills to enter and exit correctly, you have all the components you need to be successful.

You will work through learning and improving on each of these skills as you become a successful. As stated, some students have worked through these steps in as little as a few weeks. Some it takes much longer and as regardless the length of time, you must achieve a high level proficiency in the following 3 areas if you truly wish to make any real money day trading the markets with Nexgen’s software.

1. Trade Recognition- It is imperative to learn and anticipate the correct setups that have high probability of positive returns. This is the very foundation of your trading plan. Study chart history, Market Replay, and live charts daily to find and annotate and capture pictures of the trade setups. The more you review, the better you get at recognizing the best setups.
2. Entry execution – The best trading plans utilize several types of entries. You will need to understand the different type of entries you should utilize depending on the “look” of your setups. A skill that is imperative you get right for successful trading outcomes.
3. Exiting the trade- This is where the money is made or lost. If you exit properly you will minimize risks when you lose and maximize the profitability of every trade.

START SIMULATION- It is vital that you not only recognize trades before they happen, you must now hone your skills as a trader by actually trading. You must prove your understanding of the plan by making simulated trades that are highly profitable. Only when you are completely comfortable pushing the button live, fine tuning your own version of the plan, will you be able to make real money trades.

1. Set up profit targets and stop losses in the simulator
2. Place the trades according to the rules
3. Annotate your charts with reasons for entry and exit. [example1](#) [example2](#) ([Video example](#))
4. [Track your trades with some type of spreadsheet / document and save a picture of trades](#)
5. Share your trades with the educator and or sales associate for review in class using [JING](#) to take pictures and [ScreenCast.com](#) to broadcast them. ([Watch Video](#))

It is vital that you not only recognize trades before they happen, you must “FINE TUNE” your own entry and exit criteria. During simulation, you will learn which entry techniques work best for you. You will also work on your trade management, moving of stops and targets to maximize profits and minimize risk properly.

LIVE MONEY- Only when you have 100% confidence in your plan and your execution should you move to live money. Do not rush this move to live money. You cannot practice “too much”.

If you have any questions please ask. Thank you again for your participation with Nexgen.
